

Being hearing impaired and just recently lost more of my hearing. I fully rely on Closed Captioning now. My children "laugh" when they hear something being said on TV and the Captions are different. (Father vs Fart) It is frustrating to watch the news and not understand fully what's being said because of incomplete captioning. As much as we appreciate it, "good enough is NOT good enough"... Like many others- Live broadcast and "Special Reports" either local or national are not in caption. Captioning benefits everyone not just the deaf...aging, children, learning a 2nd language...
